Management Summary

Eight-product review of research, model corrections and the evidence still needed for a commercial decision.

Little Millet / Base / Revised indicative

ECONOMIC AUD/KG	ECONOMIC AUD	MODEL CASH AUD	NON-GOODS SHARE
2.65	**13,247.38**	**13,492.38**	**40.2%**
per shipped kg	whole shipment	including model GST	of economic cost

Context: 5,000 kg dehulled Little Millet, India to Melbourne by sea LCL; illustrative warehouse delivery 30 km from port. Original price, freight and FX inputs are retained with their research dates. Figures are **Indicative**.

Management finding: The revised workbook provides a consistent calculation structure and a clearer record of uncertainty. It does not yet establish supplier readiness, import approval, buyer demand or an achievable wholesale selling price.

What changed

Workstream	Completed revision	Remaining condition
Calculation reliability	Repaired route logic; explicit government charges, origin scope and GST controls.	Obtain itemised supplier, forwarder, broker and tax confirmation.
Scenario coverage	24 revised primary cases across eight products; 21 original cases retained.	Kodo Low/High and Sorghum Base are newly defined planning cases.
Market evidence	16 refreshed retail references and separate annual HS trade series through 2025.	Retail offers and broad imports are context, not proven demand.
Commercial follow-up	Product-level verification and action registers.	No supplier quotation, buyer acceptance or dispatch approval is evidenced.

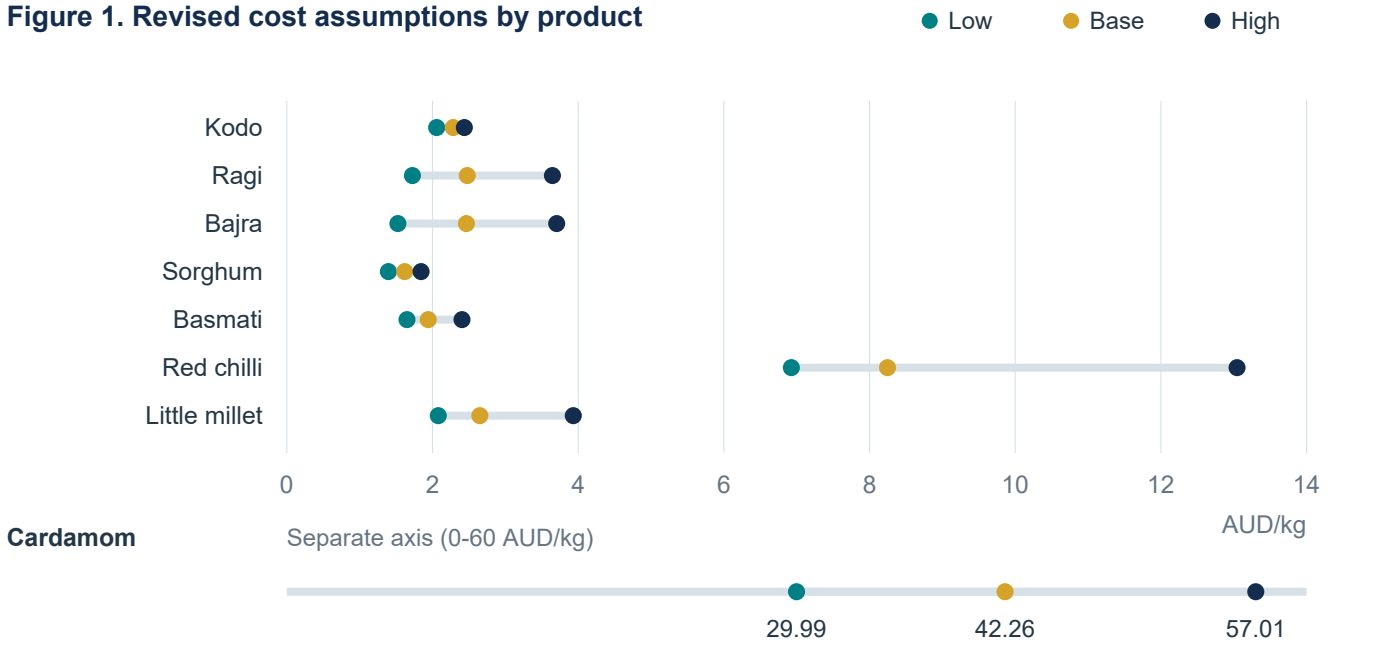

The revised Little Millet cost is AUD 121.00 above the historical economic total because declaration charges are explicit. Its lower model cash requirement reflects changed tax assumptions; it is **not a realised saving**. Import GST is conditionally modelled at 0%, while AUD 245.00 local-service GST and full recovery remain assumptions.

Eight-Product Cost Overview

AUD per shipped kg. Preserve the original product order, shipment size and transport context; costs are not opportunity rankings.

Figure 1. Revised cost assumptions by product

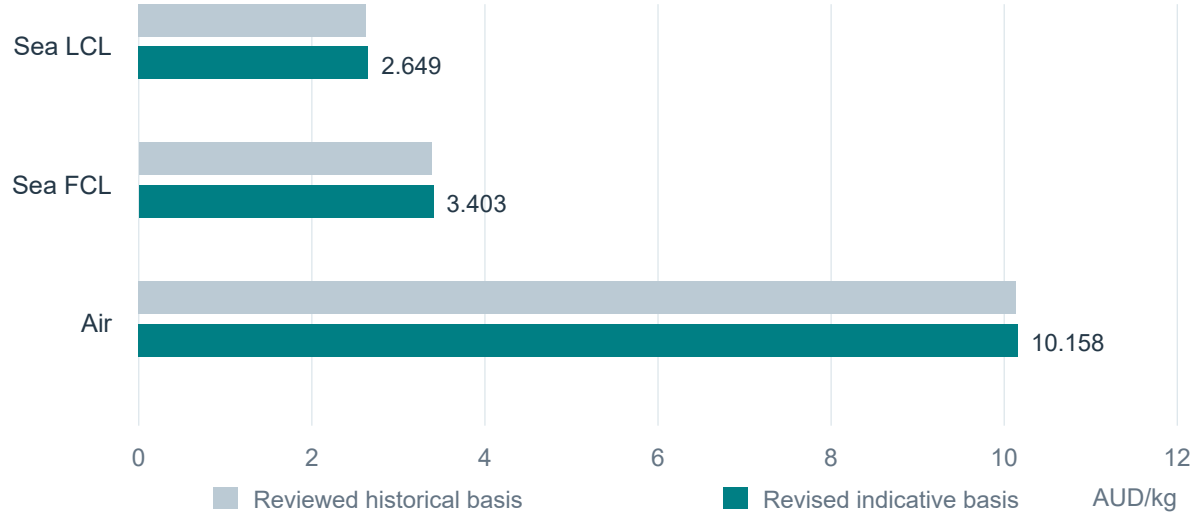

Product / form	Low	Base	High	Order / mode	Source date
Kodo Dehulled grain	2.057	2.285	2.437	5,000 kg Sea LCL	2026-09-19
Ragi Whole grain	1.724	2.477	3.647	5,000 kg Sea LCL	2026-09-13
Bajra Whole raw grain	1.525	2.465	3.705	5,000 kg Sea LCL	2026-09-03
Sorghum Food-grade flour	1.394	1.618	1.843	20,000 kg Sea FCL	2026-08-23
Basmati 1121 steam rice	1.650	1.941	2.405	24,000 kg Sea FCL	2026-08-06
Red chilli Ground chilli	6.927	8.247	13.045	1,000 kg Sea LCL	2026-07-31
Little millet Dehulled grain	2.079	2.649	3.933	5,000 kg Sea LCL	2026-10-04
Cardamom Whole green pods	29.991	42.260	57.011	1,000 kg Sea LCL	2026-10-12

Finding. Revised Low/Base/High cases now cover all eight products, including Cardamom on a separate cost axis.
Interpretation. Use each range to test its own order economics. Cardamom's 1,000 kg FCA Sydney case has a different product value and basis.
Limitation. Kodo Low/High vary product price only (USD 0.70/0.95 per kg). Sorghum Base uses disclosed input midpoints, not an original Base or the average of final totals. Fees remain Indicative.
Source. Cost Build!AD7:AD30; Cost Inputs!AP7:AR30; original research dates in Product Register!E7:E14.

Little Millet: Route Corrections

Same product, 5,000 kg and Base inputs. Historical and revised assumptions are shown separately.

Figure 2. Little Millet route economics, 5,000 kg

Finding. Revised FCL is 28.4% above LCL; Air is 3.83 times LCL.
Interpretation. Sea LCL remains the lowest-cost option in this specific small-order model. Requote when quantity, packing or urgency changes.
Limitation. These are dated freight budgets. Mode-specific terminal, volumetric, inspection and delivery costs need quotations. No new order/mode combinations are invented.
Source. Cost Build!AB26:AD26, AB31:AD31, AB32:AD32; historical reviewed alternatives AB57:AD58.

Correction trail (economic shipment cost, AUD)

Route	Original first formula	Insurance repaired	Revised v4
LCL	13,126.38	13,126.38	13,247.38
FCL	16,865.13	16,895.13	17,016.13
Air	50,492.63	50,690.77	50,788.77

The first FCL and Air formulas insured goods only. The repair applies the source 0.5% rate to **goods plus each route's freight**: FCL insurance AUD 69.63; Air AUD 237.77. This raises the earlier totals by AUD 30.00 and AUD 198.14 respectively. The revised layer then adds applicable model declaration charges: AUD 121 sea or AUD 98 air.

Source trail: original Little Millet calculator Cost Model!C13:C16,C25,C33:C34; reviewed historical alternatives in v4 Cost Build!AB57:AD58; revised insurance and charges Cost Build!K26:Q26,K31:Q32. Original files are preserved.

Cost-scope control: FOB origin handling is assumed included; extra origin cost is zero unless a supplier contract shows an exclusion. The warehouse distance and destination allowances remain planning assumptions.

Little Millet: Cost Drivers and Cash

Base sea LCL. Economic cost and cash use the same build; GST credits are conditional.

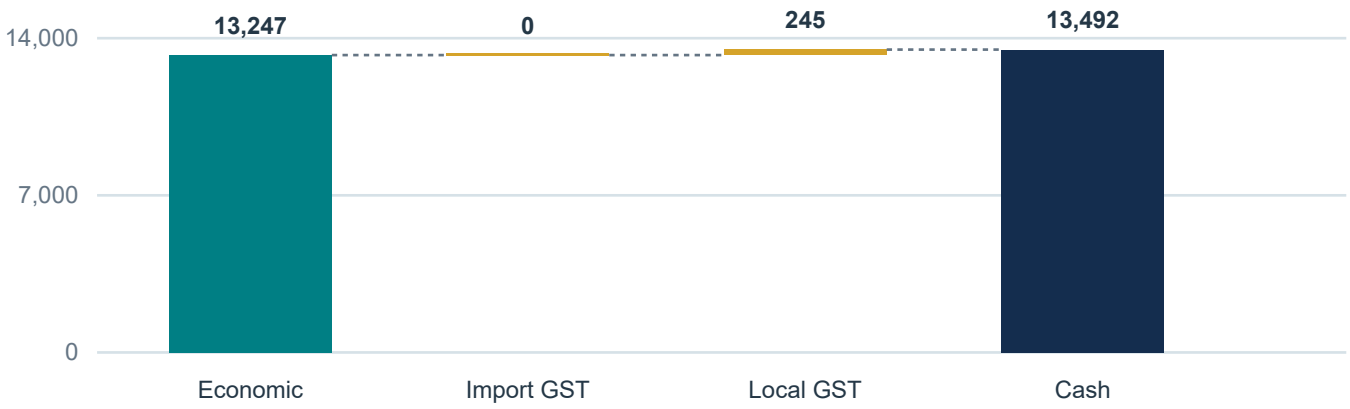

Figure 3. Little Millet Base economic cost composition

Goods	7,925.50	59.8%
Freight + insurance	2,300.88	17.4%
Compliance + government	921.00	7.0%
Destination	2,100.00	15.9%

Finding. Goods contribute 59.8%; non-goods contribute 40.2%. Freight plus insurance is AUD 2,300.88.
Interpretation. Itemised freight, terminal and delivery quotations are the most useful next checks after the supplier price.
Limitation. Compliance contains allowances, not evidence of an inspection or treatment requirement.
Source. Cost Build!I26:V26,AB26,AF26.

Figure 4. Economic cost to model cash requirement (AUD)

Finding. AUD 13,247.38 economic cost + AUD 0.00 import GST + AUD 245.00 local-service GST = AUD 13,492.38 cash.
Interpretation. The difference is a model tax cash provision; qualifying credits may be recovered later. Non-recoverable GST must remain in economic cost.
Limitation. Plain-food import GST 0%, service-fee GST allocation and full credits require transaction-specific confirmation. Broker/forwarder invoice rules can change the basket.
Source. Cost Build!W26:AC26; Cost Inputs!AD26:AJ26; official references REG01-03, REG08-11.

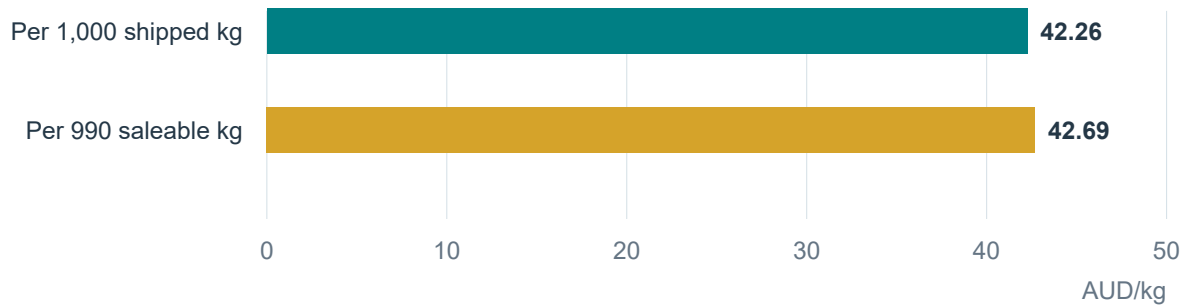

Government fees are separate from broker fees: electronic IPC AUD 50 at this customs value, plus sea FID AUD 71. Public fee schedules verify those rules, but they do not constitute a complete clearance quote.

Cardamom: Added Product Case

Whole green Elettaria cardamomum pods containing seeds; nominal 7 mm grade remains unverified.

Commercial context	Source-based planning input
Shipment / route	1,000 kg; 100 x 10 kg trade bags; FCA named Nhava Sheva CFS to Sydney by sea LCL.
Goods / currency	USD 27.00/kg FCA proxy x 1,000 kg x AUD1.433/USD = AUD 38,691.00. No supplier quotation.
Load / freight	Two assumed pallets, 2.76 CBM and1,050 kg gross; chargeable 2.76 RT. Base USD 240/RT subject to USD 450 minimum.
Economic / cash	AUD 42,259.85 economic cost; AUD 42,462.27 model cash, including AUD 202.42 local-service GST.

Figure 5. Same shipment cost, two weight denominators

Finding. AUD 42,259.85 /1,000 shipped kg = AUD 42.26/kg; /990 saleable kg = AUD 42.69/kg.
Interpretation. The saleable unit cost is higher because the original model assumes 1% loss. The overview consistently uses shipped kg.
Limitation. Yield, pod grade, supplier capability and packing are assumptions. The original FCA price bridge is an unquoted proxy; insurance remains on goods value only pending insurer confirmation.
Source. Cost Build!G29:K29,AB29:AE29; Cost Inputs!E29:S29.

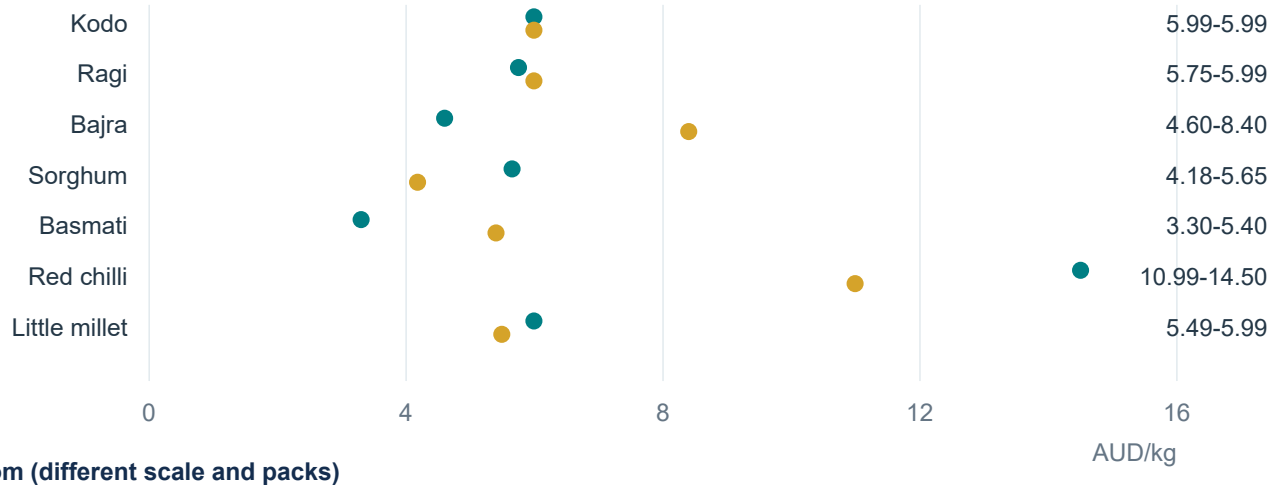

> **Repairs:** The currency is USD 27/kg, correcting the earlier report's AUD label. Duty now flows into both economic cost and cash if a nonzero sensitivity is entered. Explicit IPC/FID add AUD 223 to the original economic total. Origin cost is not charged twice under the FCA inclusion assumption.

Before progression: obtain a named-place quote, actual pallet layout, lot specification and COA; confirm the exact whole-pod BICON pathway and supplier origin/grade evidence. No quantitative FCL or Air Cardamom scenario was available to add.

Market Prices and Trade Context

Fresh evidence accessed 17 October 2026; historical observations remain separately dated in the workbook.

Figure 6. Two refreshed retail reference points per product

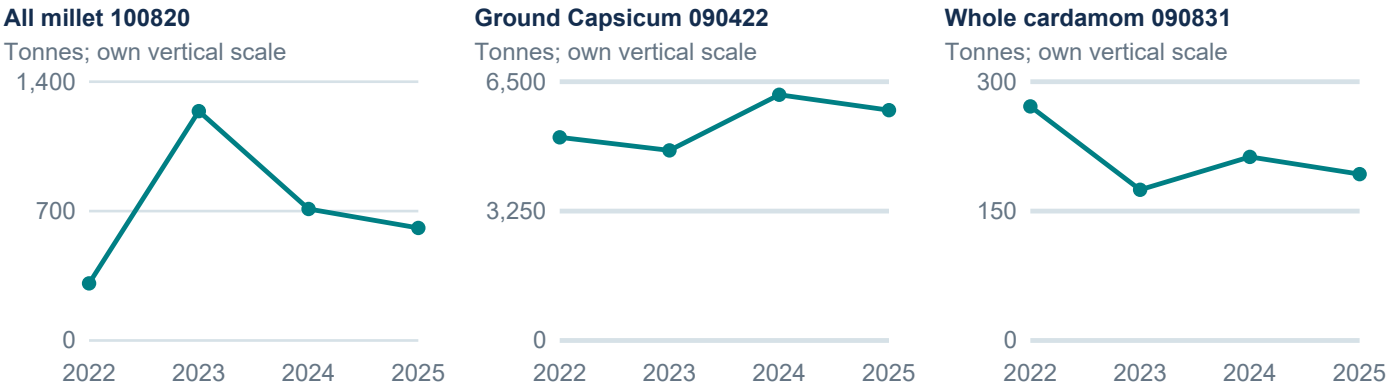

Cardamom (different scale and packs)

Hindustan 1 kg: AUD77.80/kg; Spice People 12 g: AUD315.83/kg

Finding. Sixteen references were refreshed; each dot is one listing. Little Millet references are AUD 5.99/kg and AUD 5.49/kg.
Interpretation. Read pack and grade together: the cardamom packs are 1 kg/12 g; chilli references differ in heat/variety.
Limitation. Retail prices do not prove wholesale price or demand. Dehulling and some grade matches remain unconfirmed; no import-to-retail profit is calculated.
Source. Market Evidence!A27:M42; seller, pack and source URL are in columns C, E and K; V4-M01-V4-M16.

Figure 7. Australian import volume; independent HS series

Finding. Annual import series extend through 2025 in the refreshed sources.
Interpretation. Trade data show category context and sourcing patterns; they cannot establish demand for a specific proposed grade or buyer.
Limitation. Separate axes and classifications. HS 100820 is broad millet; 090422 includes ground Capsicum/Pimenta; 090831 is whole cardamom. Legacy 090830 and non-seed 100829 remain separate workbook series.
Source. Market Evidence!A48:G65; annual source URLs in column F. WITS/UN Comtrade, accessed 17October 2026.

Commercial Verification Still Required

An evidence matrix for the eight product cases. Official rules have been refreshed; transaction-specific approvals have not been obtained.

Product / form	Tariff candidate	Import path	Commercial evidence
Kodo Dehulled food grain	1104.29.00 General Free; conditional	**Open** Exact current BICON branch unresolved.	Supplier lot specification/COA and live quote not verified. Buyer interest and wholesale price not evidenced.
Ragi Whole food grain	1008.29.00 General Free; conditional	**Open** Exact current BICON branch unresolved.	Supplier lot specification/COA and live quote not verified. Buyer interest and wholesale price not evidenced.
Bajra Raw whole food grain	1008.29.00 General Free; conditional	**Open** Exact current BICON branch unresolved.	Supplier lot specification/COA and live quote not verified. Buyer interest and wholesale price not evidenced.
Sorghum Food-grade sorghum flour	1102.90.00 General Free; conditional	**Open** Exact current BICON branch unresolved.	Supplier lot specification/COA and live quote not verified. Buyer interest and wholesale price not evidenced.
Basmati 1121 steam wholly milled rice	1006.30.00 General Free; conditional	**Open** Exact current BICON branch unresolved.	Supplier lot specification/COA and live quote not verified. Buyer interest and wholesale price not evidenced.
Red chilli Pure ground dried red chilli	0904.22.00 General Free; conditional	**Open** Exact current BICON branch unresolved.	Supplier lot specification/COA and live quote not verified. Buyer interest and wholesale price not evidenced.
Little millet Dehulled grain for human consumption	1104.29.00 General Free; conditional	**Open** Exact current BICON branch unresolved.	Supplier lot specification/COA and live quote not verified. Buyer interest and wholesale price not evidenced.
Cardamom Whole green 7 mm cardamom pods, seeds retained	0908.31.00 General Free; conditional	**Open** Exact current BICON branch unresolved.	Supplier lot specification/COA and live quote not verified. Buyer interest and wholesale price not evidenced.

Five priority actions

1. Importer and broker: confirm botanical identity, processing, viability and the current BICON branch.
2. Supplier and buyer QA: agree grade, specification, sample, lot testing and MOQ.
3. Forwarder and broker: obtain an itemised lane, CFS, clearance and warehouse quote.
4. Broker and accountant: confirm classification, customs value/FX, food GST and credit entitlement.
5. Buyer and importer: confirm purchase interest, wholesale price basis and final English label.

For dehulled Kodo and Little Millet, 1104.29.00 is the worked-grain candidate, replacing an automatic raw-millet assumption. Cardamom whole pods differ from crushed/ground spice. These candidates require final product evidence and broker confirmation.

Source: Product Register!A7:L14; Action Register!A7:I46; REG04-06, REG08-18, REG21. Current BICON flow could not be completed after access failures. No permit/treatment outcome or admissibility is asserted. Confirmed owners, deadlines and manager decisions remain blank.

Manager Feedback: Response and Evidence

Review record and source map for the companion Excel workbook.

Feedback	Revision completed	Still to verify
Little Millet discrepancies	Route insurance and route selection aligned; government fees explicit.	Freight and mode-specific local quotes.
Incomplete scenarios	New Kodo price-only Low/High; new Sorghum input-midpoint Base.	Replace Indicative inputs with matched quotes.
Freight, duty and GST	Updated official references; separate taxes, credits and declarations.	Shipment classification, tax treatment and invoices.
Retail/trade not demand	Fresh references retain pack/form; trade categories separated.	Buyer interest and achievable wholesale terms.
Supplier/import readiness	Eight-product verification and action matrix.	Supplier evidence and exact BICON conditions.

Definitions. Economic cost excludes GST assumed recoverable. Cash includes GST paid before recovery. FOB/FCA define the contractual handover and cost scope. LCL is shared-container sea freight; FCL is a full-container booking. **Indicative** means a planning estimate, not a quotation or commitment.

Limitation. Original dates and values are preserved. Model revisions are not realised savings or measured sales outcomes. Needs confirmation from customs broker / buyer / forwarder.
